

VENDING AREAS

Vending Areas: In each building, at least one area shall be provided for the installation of vending machines. The size and numbers of these areas shall be appropriate for the size and usage of the building. Each vending area shall be accessible from a public corridor but shall be separated from it such that individuals can use the machines without obstructing the corridor, especially if it is an egress corridor.

Vending areas shall be located near a building service entrance and/or near an elevator that is near a service entrance to facilitate restocking and service with minimal impact to the building and its occupants. Locating vending areas near public restrooms is also desired.

Vending machines locations shall not be designed to obstruct ventilation system components.
